

Blue light, first on scene

Blue light services arrive on scene (not from the manual!!)

Police take initial command of all land based major incidents but in reality it is a team effort

Local knowledge – You are the experts

We will rely on 2D mapping and the calls from the public via our control room

Having a local plan is good, having a local plan that has been tested is better, having a local plan that has been tested and uploaded to Resilience Direct is like GOLDUST!

Whilst having that local plan is essential to saving lives blue light services are unlikely to have access to that on arrival. We will rely on a sitrep from you.

# You will know

- The risks
- The location of the most vulnerable people
- Best access/egress
- Best RV point (parking, services, signal!)

# We will work to METHANE

Major Incident declared

Exact location

Type of Incident

Hazards

Access to scene

Number and severity of casualties

Emergency Services required

Local knowledge and information helps us make better decisions that potentially save lives.

Joint Decision Model

Thank you for listening and thank  
you for your support.
