# Helping property level flood protection to **stack up**

As communities across the UK once again try to recover from devastating floods, thoughts turn to how protection and resilience can be improved before the next time.

New approaches are available including property level measures. These haven't always stacked up in the past - but here's how they could:

## The four i's

4) **imaginative** & robust products to improve flood protection, resilience & recovery

3) **insurance** that can pay out on claims including resilient repair aka "Build Back Better"

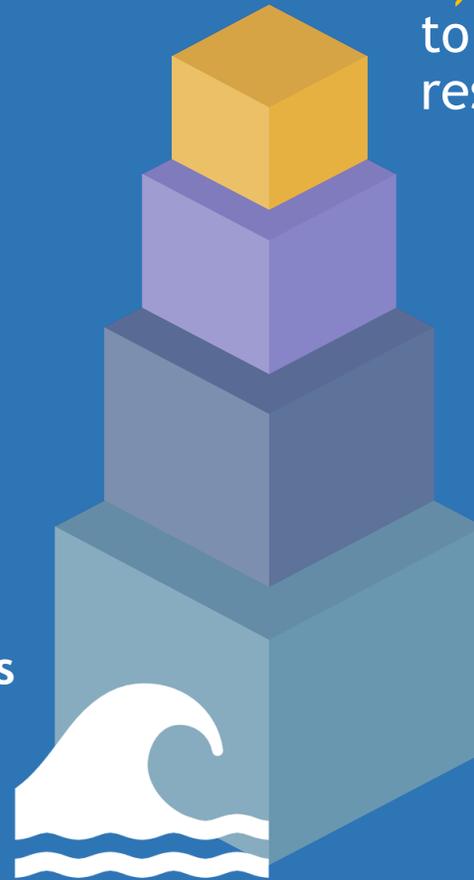

2) **incentives** to take preventative action

1) **involvement** & awareness across communities, businesses & authorities

# Two examples

Picking the right measure(s) for each property e.g. Floodframe

At all scales from street, neighbourhood, village/town, local authority to national support networks e.g. National Flood Forum

4) **imaginative** & robust products to improve flood protection, resilience & recovery

1) **involvement** & awareness across communities, businesses & authorities

# National Flood Forum

As part of the flooded community, the National Flood Forum is a charity that supports communities to tackle the things that matter to them; creating hope and reducing the fear of flooding; helping people to work together to reduce flood exposure and its impacts, both physical and emotional.

**We do this by helping people and communities to take more control of their flood risk**

Who?

- A national charity
- Well in excess of 200 affiliated groups
- Projects across the country

**Supporting and representing flood risk communities**

Supporting  
people to ...

- Prepare for flooding
- Recover from flooding
- Work in partnership
- Provide a voice

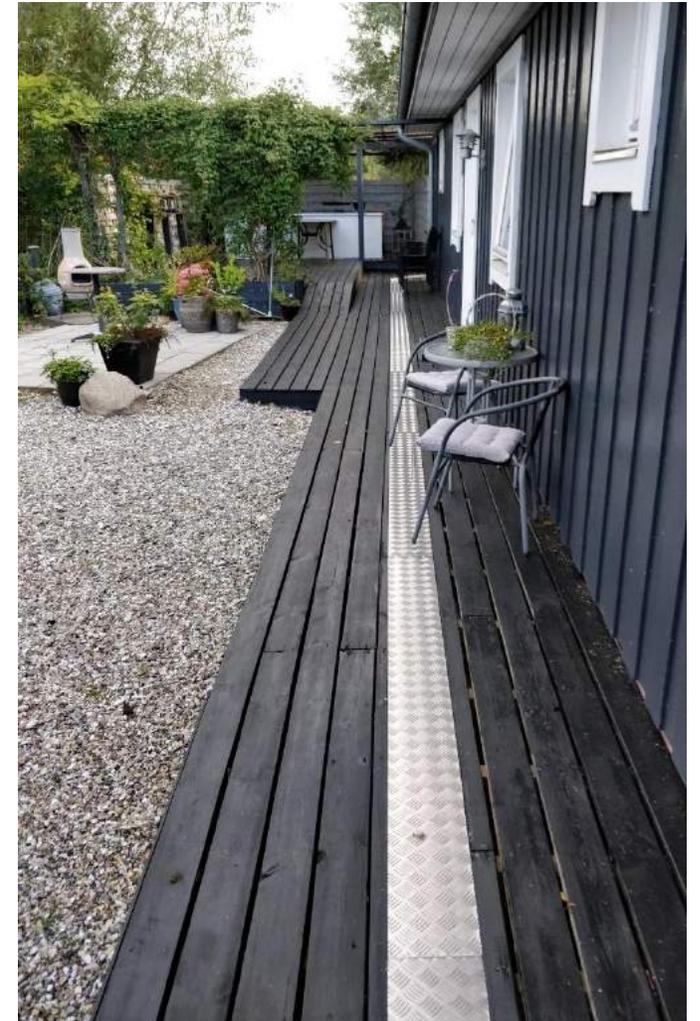

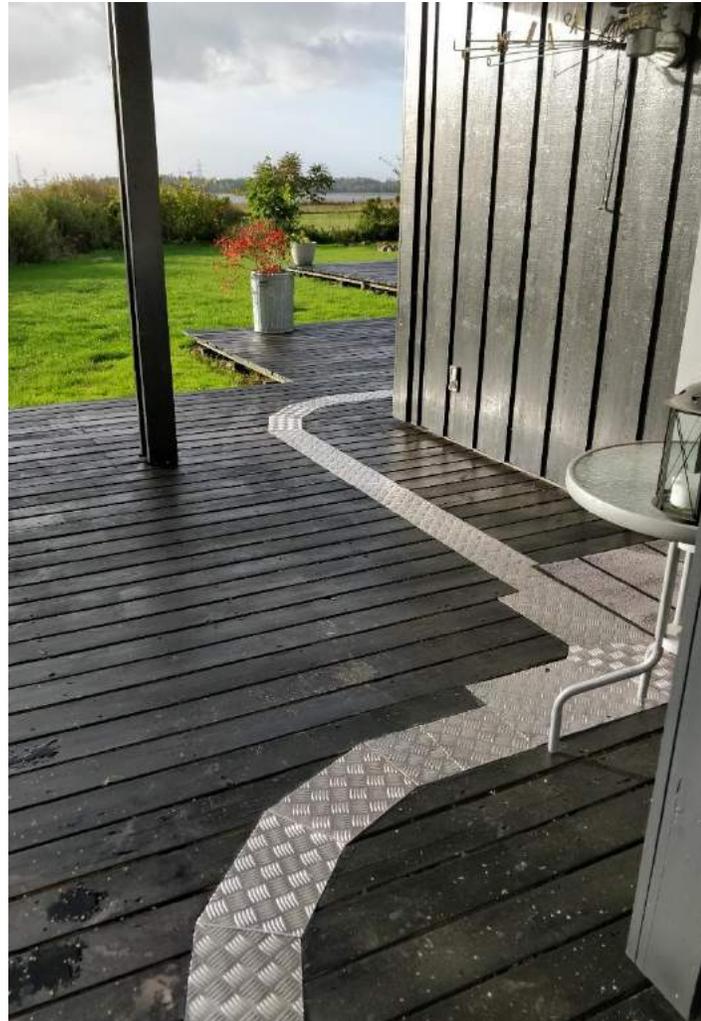

**Supporting and representing flood risk communities**

# Automated & discrete property protection

## Examples from Floodframe customers
